

GRIMSTONE RESERVOIR

The project is to construct a new 2Ml reinforced concrete tank to the east of the existing SR.

Work will be carried out whilst the existing SR and pipework is in service. The site will require 24/7 unrestricted access for WW operational staff.

The site is deemed to be rich archaeologically and several investigations have already taken place.

The reservoir is 30.5 x 30.5 x 3.0 high service reservoir linked hydraulically to the existing res, doubling the capacity.

Works are to be completed out of the shooting season – significant pheasant shoot in the area.
